JUDGING CRITERIA & EVALUATION GUIDE

How your AI agent will be evaluated

CRITERION	WEIGHT	WHAT JUDGES WILL ASSESS
1. Real Value & Problem Validation	**20%**	A clearly defined real-world problem, target users, evidence of demand and measurable potential benefits.
2. Technical Execution & Reliability	**20%**	A working AI agent that completes real tasks, with clear workflows, testing results and demonstrated reliability.
3. Trust, Safety & Human Oversight	**15%**	Data protection, security safeguards, error handling, and clear human approval or escalation processes.
4. Innovation & Defensibility	**15%**	What makes the agent different, why an AI agent is needed, and its competitive advantages.
5. Business Viability & Scalability	**20%**	Target market, pricing or sustainable funding, cost per task, growth potential and realistic operating costs.
6. Pitch & Communication	**10%**	A clear, well-structured pitch deck and demonstration video supported by evidence.
TOTAL	**100%**	

Important: No-code, low-code and fully coded agents are evaluated equally. Revenue is not required during the Championship; participants should demonstrate a credible path to sustainability.

HOW TO BUILD A STRONG SUBMISSION

Demonstrate a real working agent

Show your agent completing a defined task from start to finish. Provide working judge access and distinguish existing functionality from future plans.

Show evidence of testing

Summarise standard and challenging test cases, expected versus actual results, failures, improvements and retests. Report accuracy or completion rates where measurable.

Quantify the benefit

Use relevant measures such as time saved, errors reduced, task completion time, user outcomes or cost per task. Clearly label estimates versus tested results.

Validate the business opportunity

Identify the specific customer or beneficiary, demonstrate evidence of demand, explain differentiation and show how operating costs relate to potential users or funding.

Explain safety and human oversight

Identify what information the agent accesses, how it is protected, when approval is needed, and how uncertainty, failures or out-of-scope requests are handled.

Communicate clearly

Use a concise pitch deck and a maximum two-minute demo video showing the real agent, with the participant visible in a corner webcam overlay and verbally explaining the demonstration.

FINAL SUBMISSION CHECK

Your submission should include a functional, testable AI agent, a pitch deck and a demo video. A publicly launched product is not required at submission, but judges must have a practical way to evaluate the agent through the permitted access or verification method.

Evidence matters: Judges should be able to distinguish what your agent currently does, what you have tested, and what you plan to develop next.
