تحـــدي الذكـــاء الاصطناعي المســاعد
CREATE AI AGENTS CHAMPIONSHIP

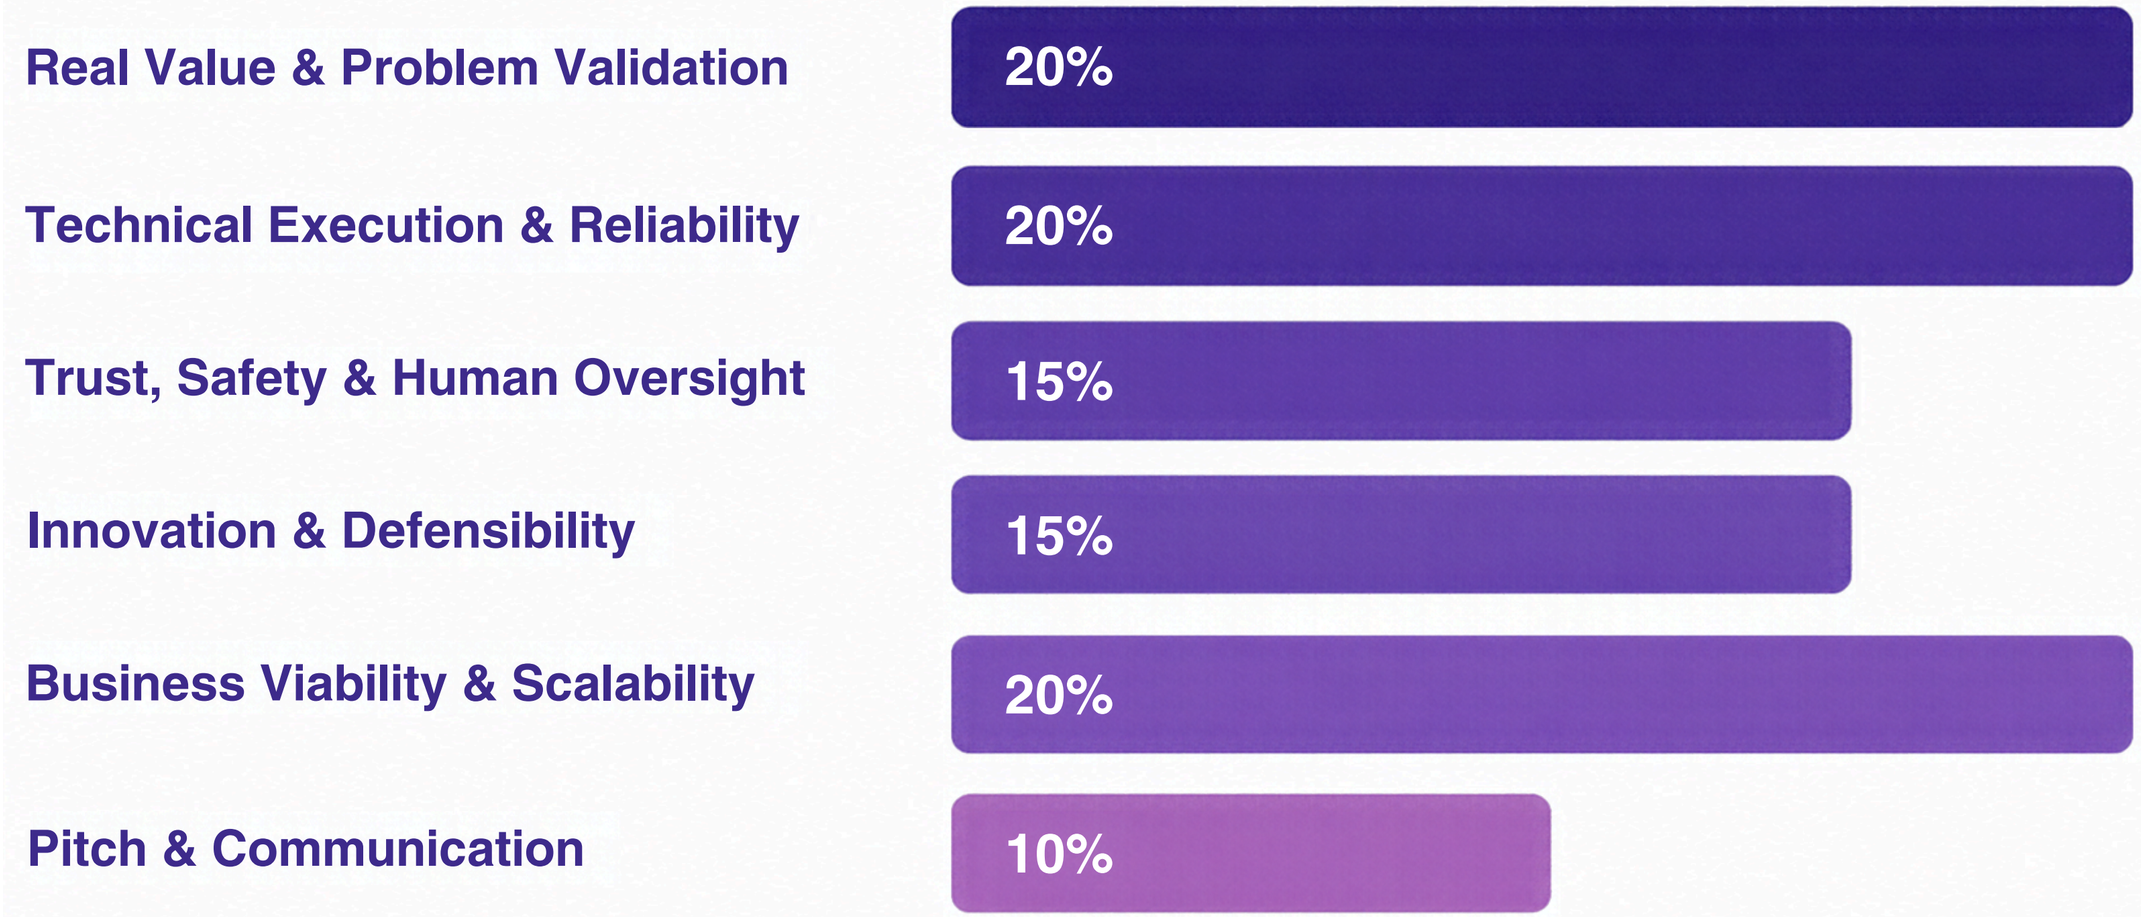
HOW THE JURY WILL EVALUATE YOUR ENTRY

Use these official weights to prioritize your pitch and evidence.



WHAT QUALIFIES AS AN AI AGENT?

An agent pursues a goal by selecting steps, using relevant information or tools, and carrying out actions.

1. Receive a goal
2. Determine steps
3. Use tools or data
4. Take action
5. Return a result

Example: an appointment coordination agent

1. User requests a slot
2. Agent checks criteria
3. Tool retrieves options
4. User approves
5. Agent confirms

A chatbot answer, static mockup or promotional concept alone does not demonstrate a working agent. If an integration is simulated, identify it clearly. You can showcase multiple AI Agents

MINIMUM WORKING PROTOTYPE

Build one meaningful and testable workflow. A public launch is not required.

1. A real task can be triggered.
2. The agent makes a meaningful decision about how to proceed.
3. It uses relevant information or tools and performs an action.
4. The workflow produces an observable result.
5. You demonstrate testing, limits and appropriate oversight.

Make it testable

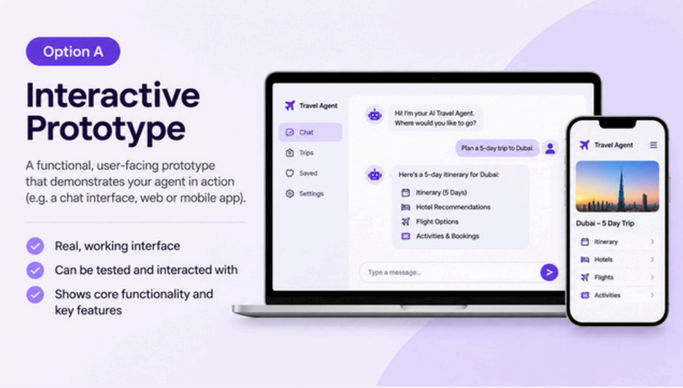
- Give judges test access: a link, credentials or a controlled demo.
- Keep test access active until the end of the Championship.
- Disclose simulated data and known limitations.
- Demonstrate a working workflow, not just a polished interface.

No-code, low-code and custom code are all acceptable development approaches.

TYPES OF PROTOTYPES TO SUBMIT

The prototype link needs to be available until the end of the Championship.

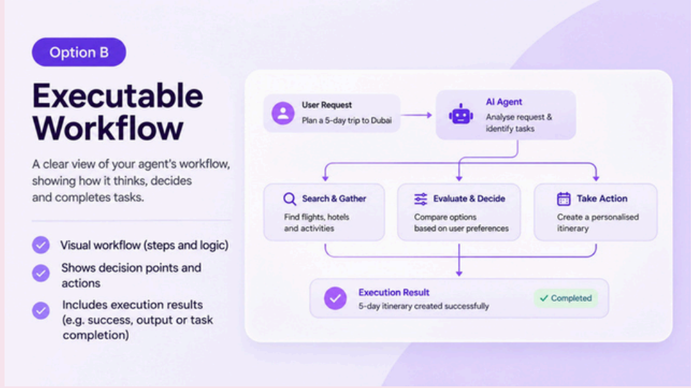
Option A: Interactive Prototype



For web applications, mobile apps, WhatsApp agents and ChatGPT-integrated agents.

Provide a working link, app access or test account that allows judges to interact with and test your agent's functionality directly.

Option B: Executable Workflow

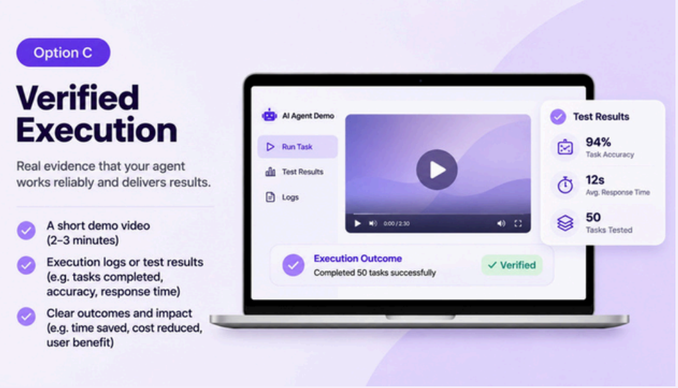


For n8n, Make, Python, API-based agents and backend systems.

Provide a simple web or chat interface that allows judges to trigger your agent, observe its workflow and verify the results without installing software or running code.

Include supporting execution logs or workflow documentation to demonstrate how your agent operates.

Option C: Verified Execution



For AI agents integrated with private systems, specialised hardware or environments that judges cannot access directly.

Provide a recorded demonstration of your agent performing real tasks, supported by execution logs and test results. Additional live verification may be requested by the judges.

QUESTIONS IN THE SUBMISSION PORTAL

The portal asks questions too. Have your answers ready before submission opens on 4 December 2026.

1

Prepare

to answer questions of your AI Agent Business Canvas

2

Answer

Answer the questions in the Submission Portal, using your Canvas answers.

3

Submit

Add your prototype, pitch deck, demo video and pitch video link.

Keep it consistent: your portal answers, pitch deck and videos should tell the same story.

Submit through the official Submission Portal on the Create AI Agent Learning Platform. Submission closes 4 January 2027.

HOW TO BUILD A STRONG SUBMISSION

01 Demonstrate a real working agent

Show your agent completing a defined task from start to finish. Provide judges with a working link or test account that allows them to interact with your agent without installing software or running code. Clearly distinguish existing functionality from future plans.

02 Show evidence of testing

Summarise standard and challenging test cases, expected versus actual results, failures, improvements and retests. Report accuracy or completion rates where measurable.

03 Quantify the benefit

Use relevant measures such as time saved, errors reduced, task completion time, user outcomes or cost per task. Clearly label estimates versus tested results.

04 Validate the business opportunity

Identify the specific customer or beneficiary, demonstrate evidence of demand, explain differentiation and show how operating costs relate to potential users or funding.

05 Explain safety and human oversight

Identify what information the agent accesses, how it is protected, when approval is needed, and how uncertainty, failures or out-of-scope requests are handled.

06 Communicate clearly

Use a concise pitch deck and a maximum two-minute demo video showing the real agent, with the participant visible in a corner webcam overlay and verbally explaining the demonstration.

FINAL SUBMISSION CHECK

Your submission should include a functional, testable AI agent, a pitch deck, a demo video and a 6-minute in-person pitch video. A publicly launched product is not required. Judges must be able to evaluate your agent through a working interface or an approved verification method, without requiring technical setup.

SUBMISSION REQUIREMENTS

Submission opens on 4 December 2026. Your submission has four components:

1

AI Agent Prototype

A working prototype that shows how your agent addresses a real-world challenge.

2

Pitch Deck

Your business opportunity, target customers, market potential, revenue model and the role of your AI agent.

3

Demo Video

Max. 2 minutes: your working AI agent completing a task from start to finish. Embedded in your pitch deck.

4

Pitch Video

Max. 6 minutes, your face must appear on the video : you take us through your pitch deck.
Submit as a YouTube, Vimeo or Canva link.

Important: Submit all four components through the official Submission Portal on the Create AI Agent Learning Platform.

A clear business model is mandatory. Existing revenue or a fully launched product is not required.

YOUR TWO VIDEOS

Two videos, two jobs. Your demo video is embedded in your pitch deck and played during your pitch video.

Demo Video

LENGTH	**2 minutes maximum**
FORMAT	Screen recording of your real, working agent
SHOWS	The trigger, the agent's actions and the outcome. Plan it with the 120-second storyboard
EMBED	Embed it in your pitch deck (Slide 4) and play it during your pitch video
RULES	Label sample data and any sped-up wait. Every number comes from your own work
FULL DEMO	Optional: a longer demo can be submitted in its own section of the portal (unlisted link, English)

Pitch Video

LENGTH	**6 minutes maximum, including your 2-minute demo**
FORMAT	In person, your team on camera. English, 1080p (16:9), clear audio
SUBMIT AS	An unlisted link: YouTube, Vimeo or Canva
SHOWS	You take us through your pitch deck, from the problem to your vision
RULES	Tell one story: problem, solution, demonstration, future
CHECK	Set to Unlisted, then open the link in a private window to confirm judges can view it

Submission phase: 4 December 2026 – 4 January 2027. Videos are in English. There is no file size limit in the portal; MP4 at 1080p is recommended.

CREATE AI AGENTS CHAMPIONSHIP

YOUR PITCH STRUCTURE

Business Concept, AI Agent Prototype & Commercial Viability

تحـــدي الذكـــاء
الاصطناعي المســاعد
CREATE AI AGENTS
CHAMPIONSHIP

How to Use This Guide

Your roadmap to an effective pitch

NOTE

This guide provides a recommended pitch structure. You may customize the design, colours and branding to reflect your business, while ensuring that all required information is included.

YOUR ROADMAP TO AN EFFECTIVE PITCH

تحـــدي الذكـــاء الاصطناعي المســاعد
CREATE AI AGENTS CHAMPIONSHIP

01	**Follow the Structure**	Use each section to explain your business concept, the problem you are solving, your target customers, revenue model and growth strategy.
02	**Showcase Your Working AI Agent**	Demonstrate how your agent works, the tasks it performs, the decisions and actions it takes, and the value it delivers to your proposed business.
03	**Demonstrate Commercial Potential**	Explain who will use and pay for your solution, how your business intends to generate revenue and what makes it commercially viable.
04	**Build on Your Learning**	Use the knowledge, exercises and resources from the Digital Academy, masterclasses, workshops and mentorship sessions. You will be asked to answer the questions in the AI Agent Business Canvas. Use your completed Canvas and Agent Card to prepare your final pitch.
05	**Keep It Visual**	Use diagrams, screenshots, prototype demonstrations and simple charts to communicate your solution clearly.
06	**Practice and Refine**	Keep your pitch concise, engaging and easy to understand, even for a non-technical audience. Focus on what your business delivers and how your AI agent makes it possible.

RECOMMENDED PITCH STRUCTURE

Twelve content slides, plus a cover and a closing slide.

Establish the need

01 Business concept & agent

02 Problem & solution

03 Customers & market

Show evidence

04 How the agent works

05 Architecture & safety

06 Performance metrics

07 User validation

Show viability

08 Differentiation & competition

09 Revenue model

10 Go-to-market plan

11 Roadmap & milestones

12 Founders’ story & team

Teams may adapt the sequence while covering every judging criterion.

COVER & TITLE SLIDE

تحـــدي الذكـــاء الاصطناعي المســاعد
CREATE AI AGENTS CHAMPIONSHIP

Title: Business or Solution Name

Sub-Title: A short tagline explaining the value your solution delivers.

Visual: Business logo, AI agent interface or relevant visual.

TIPS

- Use a clear and memorable business name.
- Write a tagline that communicates the value of your solution.
- Keep the design simple and professional.

AVOID

- Overloading the slide with technical details.
- Using generic AI slogans that do not explain the business.
- Using distracting colours, visuals or complicated layouts.

SLIDE 1: BUSINESS CONCEPT & AI AGENT SOLUTION

Introduce the business, and the agent that makes it possible.

What to cover

- Introduce your proposed business or service.
- Explain what your AI agent does, with a real-world example.
- Show how the agent enables your business.

Problem

- What business are you proposing?
- What product or service will you offer?

Solution

- What does your AI agent do?
- How does it enable your business?

VISUALS: Business logo, product interface or a simple illustration of how the solution works. Add your agent logo or prototype screenshots.

SHOW

- Simple language, as if for someone unfamiliar with AI.
- The agent clearly tied to your product or service.
- A brief introduction.

AVOID

- Describing the agent without the business.
- Excessive technical terminology.
- Broad claims without evidence.

SLIDE 2: THE PROBLEM AND SOLUTION

Define the problem first, then show how your agent improves the process.

Problem

- Define the specific problem your business addresses
- Identify who experiences it.
- Explain how it is addressed today.
- Use data, research or customer insights to show why it matters.

Your Solution / Concept Validation

- In 1–2 sentences, explain how your agent addresses the problem.
- Show how it improves the existing process.
- Describe the benefits customers can expect.
- Bonus: early validation through surveys, interviews or user testing.

VISUALS: A simple before-and-after comparison: how the problem is addressed today versus how your solution improves it.

SHOW

- A specific customer need, backed by evidence.
- The solution clearly connected to the problem.

AVOID

- Broad claims without evidence.
- Technical features instead of customer benefits.

SLIDE 3: TARGET CUSTOMERS, CUSTOMER PERSONA & MARKET OPPORTUNITY

The person using the agent may differ from the person paying for it. A student uses an education agent; a school or parent pays.

1 Target Audience

- Who will use your solution?
- Who will pay for it?
- Who makes the purchasing decision?

2 Ideal Customer Persona

- Who is your ideal first customer?
- What are their needs and frustrations?
- What motivates them to purchase your solution?

3 Market Opportunity

- **TAM (total addressable market): t**he total potential market for your solution
- **SAM (serviceable available market):** the part of it your business can realistically serve
- **SOM (serviceable obtainable market):** the share you can capture in the initial years

VISUALS: Customer persona profile and TAM, SAM and SOM market-size diagram.

SHOW

- Users, customers and payers, clearly identified.
- A realistic first market, backed by research or data.
- The Target Audience, Ideal Customer Persona and Market Opportunity sections of your AI Agent Business Canvas.

AVOID

- Defining your audience as “everyone.”
- Confusing users with paying customers.
- Market estimates without supporting evidence.

SLIDE 4: HOW YOUR AI AGENT WORKS – PROTOTYPE DEMO

Show a real, working agent. A working workflow matters more than a polished interface.

What to cover

- Show how the agent operates and interacts with users.
- Include a workflow diagram: triggers, steps, tools, decisions and human approval points.
- Demonstrate a real example of the agent solving the identified problem.

Must Include

- Key workflows, tools and integrations
- How the agent decides and completes tasks
- Human oversight, error handling and limits
- Testing results and evidence of reliability
- Simulated data and limitations, disclosed

VISUALS: Workflow diagram and screenshots of key functions, plus a short demo video of the agent in action.

DEMO VIDEO: Two minutes at most. Plan it with the Two-Minute Demo Video Storyboard.

SHOW

- One meaningful use case that supports your business.
- Working features clearly separated from planned ones.
- Your Agent Card, to explain the workflow.

AVOID

- Mockups or conceptual designs only.
- Planned features presented as operational.
- Features unrelated to the business.

THE 120-SECOND DEMO STORYBOARD

Show your real agent doing a real task, start to finish. Two minutes at most, about 280 spoken words.

1 0:00–0:22
User & problem

- Your team and who the agent is for
- One real input that goes wrong
- Proof the problem is real, as a number

2 0:22–0:46
Agent at work

- Your agent doing its one task, start to finish
- The moment a person approves or takes over
- One before-and-after number

3 0:46–1:16
How it works

- Steps from trigger to handover
- The data or tools it uses
- A case it won't handle
- How personal data stays safe

4 1:16–1:40
Evidence

- One thing that broke, and the fix
- Cost per task
- Test results, as numbers

5 1:40–1:52
Why it wins

- What people use today vs your agent
- A price, marked as an estimate

6 1:52–2:00
Next & try it

- Built today, next, one limit, goal
- Link or QR for judges

Show: the real agent, not slides about it. Label sample data and any sped-up wait. Every number comes from your own conversations, tests or dashboard.

SLIDE 5: TECHNICAL ARCHITECTURE & SAFETY

One diagram: how your agent is built, where user data goes and when a person steps in.

1 Architecture

Which models and tools power your agent, and how does a request reach a result?

- Models, tools and integrations used
- How they connect, step by step

2 Data & Privacy

How do you protect user data and manage misuse?

- How data is processed and stored
- Access controls, encryption, deletion on request

3 Human Oversight

Which actions need approval, and how can a user correct, stop or escalate?

- Tasks that need human approval
- Escalation triggers: missing details, low confidence, out-of-scope requests

VISUALS: One architecture diagram: input → AI model → tools → result, with the human approval point and escalation path marked.

SHOW

- One diagram for all three areas.
- The actual models and tools you use.
- Limits stated openly: a clear limit builds trust.

AVOID

- Listing tools without showing how they connect.
- Claims like “fully secure” without saying how.
- Calling the agent fully autonomous when a person reviews its work.

SLIDE 6: PERFORMANCE METRICS & EFFICIENCY

Report what you measured, and keep it apart from estimates and targets.

1 Accuracy

How often does your agent get the task right?

- Number of tests and success rate
- Failures found and fixes

2 Time per Task

How long does one task take, with and without the agent?

- Time per task: today vs with the agent

3 Cost per Task

What does one completed task cost to run?

- Model usage, hosting and tools

4 Human Input

How often does a person step in?

- Share of tasks a person edits, approves or takes over

VISUALS: A results table or chart, and a before-and-after comparison of time, cost or errors.

SHOW

- Real numbers from your own tests, with sample size.
- At least one failure, and what you did about it.
- Your cost per task, carried into Slide 9.

AVOID

- Claiming perfect accuracy without showing your tests.
- Presenting estimates as measured results.
- Numbers without context, e.g. “95% accuracy” with no test count.

SLIDE 7: USER VALIDATION

Evidence of user demand matters, even before revenue. Paying customers are not required at prototype stage.

What to cover

- Describe who you interviewed or observed, and what you learned.
- Show how potential users tested or reacted to the prototype.
- Explain what you changed because of their feedback.
- Share actual usage, pilot interest or willingness to pay, if you have it.

Key Questions

- Who did you interview or observe?
- What did you learn?
- What did you change as a result?
- Is there pilot interest or willingness to pay?

VISUALS: Quotes or survey results, a feedback-to-change summary, or pilot sign-ups.

SHOW

- Real findings and sample sizes.
- The changes your feedback led to.

AVOID

- Assumptions presented as validated findings.
- Claiming demand without evidence.

SLIDE 8: UNIQUE VALUE & COMPETITIVE LANDSCAPE

Show why users would choose your agent over today's alternatives.

What to cover

- Explain what makes your solution and your agent unique, in real-world value: time saved, costs cut, efficiency gained.
- Compare it with how the problem is solved today and with 2–3 relevant competitors.
- Show their strengths, limitations and market positioning
- Show how your solution and your AI agent solve it differently

Key Questions

- What unique value does your solution and agent offer?
- Why would users choose it over existing solutions?
- What are competitors' strengths and limitations?
- What measurable benefits does it provide?

VISUALS: Icons or diagrams of your key differentiators, and a competitor map or matrix.

SHOW

- Measurable benefits and real-world impact.
- 2–3 relevant competitors or existing solutions.

AVOID

- "Powered by AI" as your advantage.
- Unsupported claims, or portraying competitors negatively.

SLIDE 9: REVENUE MODEL & PROFITABILITY

Show a credible path to financial sustainability.

What to cover

- Identify who pays and what they pay for.
- Outline revenue streams and pricing: subscription, licence, usage-based or enterprise.
- Estimate cost per task: AI usage, integrations and human intervention.
- Explain how costs and profit change as usage grows.

Commercial Model

- How will your agent generate revenue?
- Who will pay, and how?
- What is the cost per task, and how does it affect profit as usage grows?

VISUALS: Simple pricing table, revenue breakdown or financial projections.

SHOW

- A clear revenue model and pricing strategy.
- Realistic assumptions. Separate tested costs from assumptions; a detailed forecast is optional.

AVOID

- Vague revenue streams without a clear business model.
- Unrealistic projections or overly complex calculations.

SLIDE 10: GO-TO-MARKET PLAN

Show how you will reach your first users, then scale.

What to cover

- Explain how you will introduce your agent to your target audience and attract initial users.
- Name your marketing and distribution channels: social media, industry networks, direct outreach, partnerships.
- Outline your acquisition strategy: collaborations, budgets and growth opportunities.

Go-to-Market Plan

- How will you reach and attract your first users?
- Which channels or partnerships will you use?
- How will you grow adoption over the next 12 months?

VISUALS: Timeline or Gantt chart.

SHOW

- Clear, realistic launch steps.
- Partnerships, channels and estimated budgets.

AVOID

- Vague plans like “social media marketing” with no actions.
- Growth targets with no acquisition plan.

SLIDE 11: ROADMAP / KEY MILESTONES

Show how your MVP becomes a live agent, ready for the Grand Finale.

What to cover

- Set three measurable milestones for the next 6–12 months.
- Show progress: user feedback, surveys, waitlists and early partnerships.
- Identify key partners, resources and approvals.
- Outline your plan to develop and scale the agent in the UAE, including funding needs.

Operational Plan

- What resources and technologies do you need to develop and scale?
- What are your key development and testing milestones?
- Which partnerships or support will help?

VISUALS: Timeline or Gantt chart showing 4–5 clear phases.

SHOW

- Realistic timelines and progress made.
- Clear next steps, kept visual and simple.

AVOID

- Unrealistic launch or growth commitments.
- General tasks instead of measurable milestones.

SLIDE 12: FOUNDERS' STORY & KEY TEAM MEMBERS

Show why this team can build, launch and support this agent.

What to cover

- Share what inspired you and your personal connection to the problem.
- Present your long-term vision for the business.
- Meet the team behind [Your AI Agent Name]: relevant experience, strengths and industries.

Team & Gaps

- Who owns AI development, product delivery and customer learning?
- What skills, partnerships or resources do you need next?
- Solo founder? Explain your role and how you will cover gaps.

VISUALS: Founder photo or an image of your inspiration, team photos with roles, logos of past companies.

SHOW

- An authentic, concise story tied to the problem.
- 2–3 relevant skills per team member.

AVOID

- Lengthy personal stories or unrelated career histories.
- Repeating technical details about the agent.

THANK YOU SLIDE: CALL TO ACTION & NEXT STEPS

End with one clear next step.

What to cover

- Include your agent’s name and a memorable tagline.
- Add contact details or links to your demo, website or social media.
- Close with a clear call to action.

VISUALS: Agent logo or branding, prototype screenshot, and an optional QR code linking to your demo or website.

SHOW

- A strong, memorable statement of your agent’s value.
- Contact information and a clear next step.

AVOID

- New information or technical details.
- Too much text or too many visuals.
- Ending without a call to action.

FINAL SUBMISSION CHECKLIST

Check all four components before uploading to the official portal.

✓ **Working agent**	One complete task, an accessible test link available till the end of the Championship.
✓ **Pitch deck**	Problem, prototype, evidence, responsible AI and venture potential.
✓ **Demo video**	Max. 2 minutes: a real screen recording of the trigger, actions and outcome, embedded in your pitch deck.
✓ **Pitch video**	Max. 6 minutes, in person: you take us through your pitch deck. A YouTube, Vimeo or Canva link judges can open. Make sure judges can see it.
✓ **Evidence**	Tests, user feedback and a clear distinction between facts and forecasts.
✓ **Submission**	Files, links and credentials work for independent judging.

Use the portal’s final published technical and eligibility instructions as the authority.

GOOD LUCK!

Recommended: 12–15 slides

Keep It Concise	Focus on the most important information and avoid text-heavy slides.
Make It Visual	Use screenshots, workflow diagrams and graphics to demonstrate your AI agent's capabilities.
Highlight Real-World Impact	Clearly communicate the problem, your solution and the value your AI agent delivers.
Tell a Compelling Story	Ensure your presentation flows logically from the problem to your solution, demonstration and future vision.
Practice Your Pitch	Keep explanations clear, confident and engaging, with a focus on what makes your AI agent unique.

A clear problem. A working agent. Evidence that it delivers value.

CREATE AI AGENTS
CHAMPIONSHIP

YOUR PLANNING TOOLS: BUSINESS CANVAS & AGENT CARD

Complete both before you build your deck. They organize your concept and explain your agent's functionality.

AI Agent Business Canvas

12 sections, 4 questions each. Map out your AI agent from the user, business and technical perspectives.

AI Agent Card

13 prompts that explain your agent: its task, workflow, tools, human approval points and limitations.

Where each Canvas section feeds your pitch (suggested)

Problem → Slides 1–2	**Market Opportunity** → Slide 3	**Solution** → Slides 1–2	**Current Solutions** → Slides 2 and 8
Target Audience → Slide 3	**Ideal Customer Persona** → Slide 3	**Key Differentiators** → Slide 8	**Competitors** → Slide 8
Go-to-Market Plan → Slides 10–11	**Commercial Model** → Slide 9	**Operational & Agent Model** → Slides 4–6	**Key Partners & Scale** → Slide 11

Use your completed Canvas and Agent Card to prepare your final pitch.

YOUR PLANNING TOOLS: BUSINESS CANVAS & AGENT CARD

Complete both before you build your deck. They organize your concept and explain your agent's functionality.

AI Agent Business Canvas

12 sections, 4 questions each. Map out your AI agent from the user, business and technical perspectives.

AI Agent Card

13 prompts that explain your agent: its task, workflow, tools, human approval points and limitations.

Where each Canvas section feeds your pitch (suggested)

Problem → Slides 1–2	**Market Opportunity** → Slide 3	**Solution** → Slides 1–2	**Current Solutions** → Slides 2 and 8
Target Audience → Slide 3	**Ideal Customer Persona** → Slide 3	**Key Differentiators** → Slide 8	**Competitors** → Slide 8
Go-to-Market Plan → Slides 10–11	**Commercial Model** → Slide 9	**Operational & Agent Model** → Slides 4–6	**Key Partners & Scale** → Slide 11

Use your completed Canvas and Agent Card to prepare your final pitch.

THE AI AGENT BUSINESS CANVAS

Purple: the problem and the customer. Coral: how it works as a business.

1 PROBLEM

- What specific problem does your agent solve?
- Who experiences it, and how often?
- What does this problem cost in time or money?
- What evidence confirms the problem exists?

2 MARKET OPPORTUNITY

- How large is the addressable market?
- What evidence shows demand for the solution?
- What are your TAM, SAM and SOM estimates?
- Which market segment will you target first?

3 SOLUTION

- What task does the agent complete end to end?
- Why use an agent instead of an app or chatbot?
- What triggers it and what result does it deliver?
- What is already working in your prototype?

4 CURRENT SOLUTIONS

- How do users solve this problem today?
- What tools, processes or workarounds exist?
- Where do these alternatives fall short?
- What would make users switch?

5 TARGET AUDIENCE

- Who benefits directly from the agent?
- Who uses it, and who pays for it?
- Which industries or communities are targeted?
- How will you reach your first users?

6 IDEAL CUSTOMER PERSONA

- Describe your ideal user and their daily tasks.
- What frustrations or constraints do they face?
- How frequently would they use the agent?
- What proof do you have from real users?

7 KEY DIFFERENTIATORS

- What makes your solution hard to replace?
- What unique data, workflow or capability helps?
- How is it better than existing alternatives?
- How will you demonstrate measurable value?

8 COMPETITORS

- Who are your direct and indirect competitors?
- What are their strengths and limitations?
- How do features, costs and outcomes compare?
- What is your sustainable competitive edge?

9 GO-TO-MARKET PLAN

- How will you acquire your first customers?
- Which channels and partnerships will you use?
- What is your 6–12 month launch plan?
- How will you measure adoption and retention?

10 COMMERCIAL MODEL

- Who pays, for what unit and at what price?
- What does one completed task cost, incl. retries?
- How do usage and customer volume affect margin?
- How will you fund or sustain the solution?

11 OPERATIONAL & AGENT MODEL

- Which models, tools and data does it use?
- What are the workflow and approval points?
- How are user data and access protected?
- What tests, failures and retests prove reliability?

12 KEY PARTNERS & SCALE

- Which partners or platforms are essential?
- What dependencies and risks could block growth?
- How will you handle more users and requests?
- What resources and milestones come next?

AGENT CARD

What it does, how it works, where a person steps in and what it cannot do.

1 DEFINED TASK

What specific task does your agent complete?

2 TRIGGER

What event or user action starts your agent?

3 WORKFLOW

List step by step what your agent does, from receiving a request to completing the task.

4 TOOLS AND INTEGRATIONS

Which AI models, applications, APIs or external tools does your agent use?

5 DATA SOURCES

What information does your agent access to perform its tasks?

6 SHAPE

How many agents are involved? Explain their individual roles.

7 HUMAN APPROVAL POINTS

Which actions require human review or approval? List them out in bullet points.

8 WHEN UNSURE OR IT FAILS

What happens when your agent encounters an error, missing information or an unfamiliar request?

9 DATA HANDLING

How does your agent collect, store, protect and manage user data?

10 COST PER TASK

What is the estimated cost of completing one task, including model usage, tools and hosting? List it out in bullet points.

11 BUILT AND PLANNED

What functionality currently works, and what remains under development? List it out. Built: / Planned:

12 LIMITATIONS

What can your agent not do? Include known restrictions and weaknesses. List out in bullet points.

13 LINKS

Provide access to your working prototype, demo, test logs or relevant technical documentation.
